## Work Experience

---

### Application Programmer, Ministry of Health and Long-Term Care (MOHLTC) Sep 2020 – Apr 2021

- Wrote Python Scripts to edit webpages via a GUI, so that clients without expertise in webpages and servers could gain access to and update server pages for latest information and reports.
- In the need to find the maximum users the server could handle, I created JMeter scripts to Performance Test SAS and Cognos reports which resulted in determining the server constraints and bottlenecks

---

## Education

**Ryerson University | Toronto ON**  
**Computer Science – BSc (Co-op) Sep 2018 – May 2023**  
**CGPA: 3.74 (Dean's List '19- '20)**  
**Majoring in Computer Science**

- Data Structures
- Object Oriented Programming
- Functional Programming

**Minoring in Mathematics**

- Calculus & Computational Methods
- Linear Algebra
- Discrete Mathematics

---

## Technical Skills

Languages	Technologies	Libraries
<ul style="list-style-type: none"><li>• Python</li><li>• Java</li><li>• Scala</li><li>• SQL</li></ul>	<ul style="list-style-type: none"><li>• Apache Spark</li><li>• PostgreSQL</li><li>• Apache JMeter</li><li>• MS Office</li><li>• Linux &amp; UNIX</li><li>• Git</li></ul>	<ul style="list-style-type: none"><li>• PyTorch</li><li>• Scikit-Learn</li><li>• NumPy</li><li>• Pandas</li><li>• Matplotlib</li><li>• Seaborn</li></ul>

---

## Projects

[\(Code on GitHub\)](#)

### [Neural Style Transfer](#)

Data Analysis | Time-Series Analysis | Deep Learning | November 2020

- A Neural Network to Transfer Style from one Image to another, producing Artistic Photographs
- Used Transfer Learning (VGG19) for feature extraction in style transfer
- Produced Beautiful Images which are on display on GitHub Repository

### [Transformers Implementations: Language Translation & Image Classification \(ViT\)](#)

NLP | Deep Learning | December 2020 - **Ongoing**

- Implemented Vision Transformer and other transformer models from research papers in PyTorch
- From Attention is all you need, created a **Language Translation** model from German to English
- From **Vision Transformer** paper, created model for classification tasks for Images

### [Generating Fake Faces with Convolutional Variational Autoencoders](#)

Dimensionality Reduction | Computer Vision | Deep Learning | August 2020

- An Unsupervised Learning Model (Autoencoder) that learns to map important features of faces
  - Maps Images to 100-Dimensional Continuous Latent Space Representation
  - Interpolation across latent space creates faces of people that never existed
  - Implemented Feature Perceptual Loss
-
