Work Experience

Application Programmer, Ministry of Health and Long-Term Care (MOHLTC) Sep 2020 – Dec 2020

In the need to find the maximum users the server could handle, I created JMeter scripts to Performance Test SAS Viya and Cognos reports which resulted in determining the server constraints and bottlenecks

Education	Technical Skills		
Ryerson University Toronto ON Computer Science – BSc (Co-op) Sep 2018 – May 2023 CGPA: 3.75 (Dean's List '19- '20) Majoring in Computer Science	Languages Python Scala SQL Java C	Technologies Apache Spark Apache JMeter Tableau SQLite MS Office Linux & UNIX Git	Libraries PyTorch Keras Scikit-Learn Spacy NLTK Numpy Pandas Matplotlib Seaborn

(Code on GitHub) **Projects**

Stock Price Prediction with LSTMs **Credit Card Fraud Detection Generating Fake Faces with Convolutional Variational** with Spark

Data Analysis | Time-Series Analysis | Deep Learning | May 2020

- Using Long-Short Term Memory Recurrent Layers to predict Stock Prices based on previous 59 values
- Implemented multiple models for a variety of stocks both in PyTorch & Keras
- Stock data visualized using Tableau and Seaborn

Big Data | Data Analysis | Machine Learning | April 2020

- Using Scala API for Apache Spark, run on a local cluster
- Used Random Tree Classifier for Binary Classification to achieve a 90 percent Test Accuracy

Autoencoders

Dimensionality Reduction | Computer Vison | Deep Learning | August 2020

- An supervised Learning Model (Autoencoder) that learns to map important features of faces
- Compresses Images to 100-**Dimensional Continuous** Representation
- Interpolation across latent space creates faces of people that never existed
